ISSUED

Notice

This CableLabs specification is the result of a cooperative effort undertaken at the direction of Cable Television Laboratories, Inc. for the benefit of the cable industry and its customers. You may download, copy, distribute, and reference the documents herein only for the purpose of developing products or services in accordance with such documents, and educational use. Except as granted by CableLabs in a separate written license agreement, no license is granted to modify the documents herein (except via the Engineering Change process), or to use, copy, modify or distribute the documents for any other purpose.

This document may contain references to other documents not owned or controlled by CableLabs. Use and understanding of this document may require access to such other documents. Designing, manufacturing, distributing, using, selling, or servicing products, or providing services, based on this document may require intellectual property licenses from third parties for technology referenced in this document. To the extent this document contains or refers to documents of third parties, you agree to abide by the terms of any licenses associated with such third-party documents, including open source licenses, if any.

DISCLAIMER

This document is furnished on an "AS IS" basis and neither CableLabs nor its members provide any representation or warranty, express or implied, regarding the accuracy, completeness, noninfringement, or fitness for a particular purpose of this document, or any document referenced herein. Any use or reliance on the information or opinion in this document is at the risk of the user, and CableLabs shall not be liable for any damage or injury incurred by any person arising out of the completeness, accuracy, infringement, or utility of any information or opinion contained in the document.

CableLabs reserves the right to revise this document for any reason including, but not limited to, changes in laws, regulations, or standards promulgated by various entities, technology advances, or changes in equipment design, manufacturing techniques, or operating procedures described, or referred to, herein.

This document is not to be construed to suggest that any company modify or change any of its products or procedures, nor does this document represent a commitment by CableLabs or any of its members to purchase any product whether or not it meets the characteristics described in the document. Unless granted in a separate written agreement from CableLabs, nothing contained herein shall be construed to confer any license or right to any intellectual property. This document is not to be construed as an endorsement of any product or company or as the adoption or promulgation of any guidelines, standards, or recommendations.

Key to Document Status Codes

Work in Progress	An incomplete document designed to guide discussion and generate feedback; may include several alternative requirements for consideration.
Draft	A document that is considered largely complete but is undergoing review by members and vendors. Drafts are susceptible to substantial change during the review process.
Issued	A public document that has undergone rigorous member and vendor review, supports cross-vendor interoperability, and is suitable for certification/qualification testing. Issued specifications are subject to the Engineering Change process.
Closed	A static document that has been reviewed, tested, validated, and closed to further Engineering Change requests to the specification through CableLabs.

Trademarks

CableLabs® is a registered trademark of Cable Television Laboratories, Inc. Other CableLabs marks are listed at <http://www.cablelabs.com/specs/certification/trademarks>. All other marks are the property of their respective owners.

1 SCOPE

This specification establishes a set of CableLabs and SCTE registries and namespaces for Names and Numbers authoritatively assigned by CableLabs.

Numerous protocol fields make use of identifiers with well-known names or number values; for example, the IETF DHCP protocol and vendor-specific option values, the IETF RADIUS and DIAMETER protocols and associated CableLabs attributes, etc. To insure that such quantities have consistent values and interpretations in different implementations, their assignment must be administered by a central authority. For IETF protocols, that role is provided by the Internet Assigned Numbers Authority (IANA). For vendor-specific protocol fields that are defined by CableLabs specifications, or when the use of such protocol identifiers may be common to multiple CableLabs projects and specifications, this document defines a common repository to hold these values.

This document borrows some of the terminology and guidelines of IETF [RFC 2434].

The scope of this version of this specification includes:

- A DHCP registry for protocol fields authoritatively assigned by CableLabs that are in use in eDOCSIS™, DOCSIS®, CableHome®, PacketCable™, and OpenCable™ specifications, for both IPv4 and DHCPv6.
- An XML registry for XML (URN, URL) namespaces for DOCSIS, PacketCable and Stewardship and Fulfillment Interfaces.
- A DIAMETER registry for PacketCable.
- A Receive Channel Profile (RCP) registry for CableLabs-defined Standard RCPs and Vendor-defined Manufacturer RCPs that are used in DOCSIS 3.0 and beyond to communicate the receiver capabilities of a cable modem.
- An ASN.1 Codes registry for CableLabs assigned MIBs.

1.1 Requirements

Throughout this document, the words that are used to define the significance of particular requirements are capitalized.

"MUST"	This word means that the item is an absolute requirement of this specification.
"MUST NOT"	This phrase means that the item is an absolute prohibition of this specification.
"SHOULD"	This word means that there may exist valid reasons in particular circumstances to ignore this item, but the full implications should be understood and the case carefully weighed before choosing a different course.
"SHOULD NOT"	This phrase means that there may exist valid reasons in particular circumstances when the listed behavior is acceptable or even useful, but the full implications should be understood and the case carefully weighed before implementing any behavior described with this label.
"MAY"	This word means that this item is truly optional. One vendor may choose to include the item because, for example, a particular marketplace requires it or because it enhances the product; another vendor may omit the same item.

2 REFERENCES

2.1 Normative References

None.

2.2 Informative References

This specification uses the following informative references.

3 ABBREVIATIONS

This specification uses the following abbreviations.

ASN.1	Abstract Syntax Notation 1
AVP	Attribute Value Pair
CCAP	Converged Cable Access Platform
CTD	Coherent Termination Device
DHCP	Dynamic Host Configuration Protocol
DOCSIS	Data-Over-Cable Service Interface Specifications
DPoE	DOCSIS Provisioning of EPON
DPoG	DOCSIS Provisioning of GPON
EPON	Ethernet Passive Optical Network
EQAM	Edge QAM
FMA	Flexible MAC Architecture
IANA	Internet Assigned Numbers Authority
IETF	Internet Engineering Task Force
MIB	management information base
NID	namespace identifier
PNM	Proactive Network Maintenance
RCC	receive channel configuration
RCP	receive channel profile
RFC	request for comments
RPD	Remote PHY device
R-PHY	Remote PHY
SMA	security, monitoring, automation
SNMP	Simple Network Management Protocol
URL	uniform resource locator
URN	uniform resource name
XML	Extensible Markup Language

4 CABLELABS DHCP PROTOCOL FIELD REGISTRY

4.1 Definition

This document establishes the CableLabs DHCP registry and defines new name spaces associated with CableLabs DHCPv4 and DHCPv6 options:

- CableLabs project codes,
- Sub-option codes for DHCPv4 options,
- CableLabs Vendor-specific Information Option codes for DHCPv6.

The CableLabs Assigned Name and Number authority has established a registry of values for each of these name spaces which are found in [CANN DHCP].

4.2 Format of the DHCPv6 CableLabs Vendor-Specific Information Option

DHCPv6 defines a Vendor-specific Information Option (see the option code `OPTION_VENDOR_OPTS` in section 22.17 of [RFC 3315]). This section defines the structure or format of the option data for the CableLabs Vendor-specific Information Option.

The format of the DHCPv6 CableLabs Vendor-specific Information option is:

```

 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
|   OPTION_VENDOR_OPTS   |   option-len   |
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
|   enterprise-number (4491 for CableLabs)   |
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
.
.           CableLabs-defined option-data           .
.
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+

```

option-code `OPTION_VENDOR_OPTS` (17)

option-len 4 + length of option-data field

enterprise-number The CableLabs' registered Enterprise Number:
4491, as registered with IANA in the Private
Enterprise Numbers:
<http://www.iana.org/assignments/enterprise-numbers.html>

CableLabs-defined
option-data An object containing one or more
CableLabs sub-options

The option-data field of the DHCPv6 CableLabs Vendor-specific Information option contains sub-option values. Each sub-option is structured as follows:

```

 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
| CableLabs sub-option-code |   sub-option-len   |
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
|           sub-option-data           |
|   (sub-option-len octets)           |
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+

```

CableLabs sub-option-code:

```

0 1 2 3 4 5 6 7 0 1 2 3 4 5 6 7
+---+---+---+---+---+---+---+---+
| res | code | sub-option type |
+---+---+---+---+---+---+---+---+

```

res: reserved for CableLabs, do not use; bits must be zero value.
code: identifies the CableLabs project code for this sub-option. The null value for these 3 bits ('000') identifies a generic DHCPv6 option that may be common to multiple projects. See the Values for the CableLabs Project Codes section of the CableLabs DHCP registry specification for the values of the CableLabs Project Codes for DHCPv6 options.
sub-option type: defines the option type.

sub-option-len length of sub-option-data field

sub-option-data the value of the CableLabs sub-option

4.3 Template for Defining New DHCPv6 CableLabs Vendor-Specific Information Option Codes

Each request for a new definition of a DHCPv6 CableLabs Vendor-specific Information Option must include:

A definition of the sub-option compliant with the format specified in this section.

An Engineering Change Request against the CableLabs DHCP registry requesting the addition of the new option.

New DHCPv6 CableLabs Vendor-specific Information Option code must be defined using the following format:

```

0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
| CL-sub-option-code | sub-option-len |
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
.
. CableLabs-defined sub-option-data .
.
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+

```

CL-sub-option-code CL_OPTION_XXXXXXX where XXXXXXXX is descriptive name of the sub-option being defined.

Sub-option-len length of sub-option-data field

CableLabs-defined
Sub-option-data An object definition with normative requirements on how a DHCP client and server must use this information.

CableLabs Project The requested CableLabs Project under which this new option should be assigned (a registered CableLabs Project code).

4.4 List of Relevant Specifications

The following list includes CableLabs and IETF specifications that contain definitions of DHCP option field values or references to the values defined in this document.

- CableLabs DHCP registry [CANN DHCP]
- DOCSIS OSSI specifications for DOCSIS 1.0 [OSSI], DOCSIS 1.1 [OSSIv1.1], DOCSIS 2.0 [OSSIv2.0]
- DOCSIS 3.0 MULPI [MULPIv3.0], OSSI [OSSIv3.0]

- DOCSIS 3.1 MULPI, OSSI [CM-OSSIV3.1], [CCAP-OSSIV3.1]
- PacketCable MTA Device Provisioning specifications version 1.0 [PKT PROV] and 1.5 [PKT PROV1.5]
- IETF [RFC 3495] and [RFC 6733]
- Remote PHY [R-PHY], R-OSSI [R-OSSI]

5 CABLELABS XML REGISTRY

5.1 Guidelines

[RFC 6289] reserves and specifies a Uniform Resource Name (URN) Namespace Identifier (NID) of 'cablelabs' for use in CableLabs projects.

It is RECOMMENDED to define CableLabs URN namespaces according to [RFC 6289].

The goal of this section is to provide guidelines for the definition of new XML namespaces under CableLabs management and some recommendations to align the target namespaces and to allow consistent versioning.

It is RECOMMENDED to define CableLabs XML (URL) namespaces as follows:

Organization Identifier	Identifier	CableLabs Project Name	Version	Type of Document	Identifier	XSD Identifier
For CableLabs: www.cablelabs.com	namespaces	PacketCable DOCSIS CableHome	2.03.0	'DTD' 'XSD'	'smi' 'reg' 'ipdr' 'netconf'	e.g., CLAB- PACM-MIB

5.2 Examples

A few examples include:

<http://www.cablelabs.com/namespaces/DOCSIS/3.0/xsd/ipdr/>

<http://www.cablelabs.com/namespaces/PacketCable/2.0/xsd/smi/>

urn:cablelabs:packetcable-example:ue:rst-sample

5.3 Registered XML Name Spaces

The following name spaces are registered.

5.3.1 DOCSIS

5.3.1.1 DOCSIS IPDR Service Definition Namespaces

<http://www.cablelabs.com/namespaces/DOCSIS/3.0/xsd/ipdr/DOCSIS-SAMIS-TYPE-1>

6 CABLELABS DIAMETER AVP REGISTRY

This section lists any IANA assigned CableLabs-specific DIAMETER applications and Command Codes, as well as CableLabs assigned DIAMETER protocol codes, including the Attribute-Value Pairs (AVP) and Experimental result codes.

For assignment of DIAMETER applications, command codes, AVP and result codes, please see the procedures in Section 6.6.

6.1 Application Identifiers

The Diameter applications are identified with the application identifiers as specified in [RFC 3588]. There are two kinds of applications: IETF standards track applications and vendor-specific applications. All application identifiers are assigned by [IANA AAA]. This chapter lists the application identifiers assigned by IANA to all CableLabs Diameter applications.

The application identifiers are transferred in Diameter command's header in the Application-ID field.

6.1.1 CableLabs-Specific Application Identifiers

There are no CableLabs-specific application identifiers at this time.

6.2 Command Codes

The command codes are used for communicating the command associated with the Diameter message. The command code is carried in the Diameter header's Command-Code field. The command codes can be divided into standard command codes allocated by IANA and experimental command codes for testing purposes only.

6.2.1 Command Codes Allocated for CableLabs

There are no CableLabs-specific command codes at this time.

6.3 Vendor Identifier

The vendor identifier (also known as Enterprise number) indicates the vendor-specific attributes, result codes and application identifiers in Diameter commands. The vendor identifier is used in the Vendor-ID field of the AVP header and in the Vendor-ID AVP. The Vendor-ID AVP is used to identify the vendor in the Vendor-Specific-Application-Id and Experimental-Result-Code grouped AVPs.

6.3.1 CableLabs' Vendor Identifier

The IANA has allocated a vendor identifier value 4491 for CableLabs [IANA EN].

6.4 Attribute-Value-Pair Codes

The AVP codes are used together with the vendor identifier to identify each attribute uniquely. There are multiple AVP namespaces. The IETF IANA namespace, that is, the AVPs with vendor identifier zero or without vendor identifier, is controlled by IANA. Each vendor controls the AVP codes within his AVP namespaces.

6.4.1 CableLabs-Specific AVP Codes

The CableLabs-specific AVPs have the Vendor-Specific bit ('V' bit) set in the AVP header and they carry the CableLabs' vendor identifier in the Vendor-ID field of the AVP header. The CableLabs-specific AVP codes are presented in the following table. AVP Names of "Obsolete" indicate that the AVP Code was previously assigned but is no longer used, and re-assignment of the AVP Code should be avoided.

Table 1 - CableLabs-Specific AVP Codes

AVP Name	AVP Code	Specification Reference	Data Type	AVP Flag Rules				
				Must	May	Should not	Must not	May Encr.
BCID	200	[PKT ES-INF]	UTF8String	V, M	P			N
Call-Transfer	201	[PKT RST-ACCT]	Group	V, M	P			N
Correlate-Reason	202	[PKT ES-INF]	Enumerated	V, M	P			N
Dialog-Id	203	[PKT ES-INF]	UTF8String	V, M	P			N
Digest-Algorithm	204	[PKT 29.229]	UTF8String	V			M	N

Session-Type	227	[PKT RST-ACCT]	Enumerated	V, M	P			N
SIP-Digest-Authenticate	228	[PKT 29.229]	Grouped	V			M	N
SIP-Message	229	[PKT ES-INF]	OctetString	V, M	P			N
Target	230	[PKT RST-ACCT], [PKT ACCT]	UTF8String	V, M	P			N
Tap-Id	231	[PKT ES-INF]	UTF8String	V, M	P			N
Transfer-Session-Call-ID	232	[PKT RST-ACCT]	UTF8String	V, M	P			N

6.5 Experimental Result Codes

The Diameter answer messages must carry either Result-Code AVP or Experimental-Result AVP. The values of Result-Code AVP are controlled by IANA. The Experimental-Result AVP is a grouped AVP containing the Vendor-ID AVP and Experimental-Result-Code AVP, thus the experimental result codes are controlled in a vendor-specific manner.

6.5.1 CableLabs-specific Experimental Result Codes

There are no CableLabs-specific result codes at this time.

6.6 Assignment of the Diameter Codes and Identifiers

6.6.1 Application Identifiers

If a specification determines it will require a new application identifier based on the rules defined in [RFC 3588], a request for an application identifier should be sent to IANA. When the application identifier is received, an Engineering Change Request needs to be submitted against this document adding the newly assigned application identifier.

6.6.2 Command Codes

If a specification determines there is a need for a new command code(s) and no CableLabs allocated command code values are available, the procedures defined in [RFC 3588] need to be followed.

It should be noted that the standard command codes allocated for 3GPP are scarce resources and getting new ones would require IETF specification work to be done. Therefore it is recommended to use the existing command codes whenever possible.

Once a new command code is assigned, an Engineering Change Request should be submitted against this document adding the newly assigned command codes.

6.6.3 AVP Codes

If a specification determines a Diameter application needs new CableLabs-specific AVP code(s), an Engineering Change Request needs to be submitted against this document adding the newly assigned AVP code value. AVP codes are available on a first-come-first-serve basis and are assigned in numerical order. Skipping AVP code values is discouraged as is reserving blocks of AVP codes for further assignment. Given the possibility for multiple Engineering Change Requests assigning AVP codes at the same time, conflicts may occur. As such, AVP code values are only guaranteed to be unique and allocated once the Engineering Change Request becomes an Engineering Change Notice. To ensure unique AVP code values, oversight of the allocation process is required and the responsibility of the CableLabs employee currently responsible for this specification.

Re-use of the existing AVPs is recommended, but special attention should be paid to the use of enumerated AVPs. Defining new values for an enumerated AVP should be agreed to case by case with the specification group responsible for the particular enumerated AVP.

6.6.4 Result Codes

If a specification determines that a Diameter application needs new CableLabs-specific result code(s), an Engineering Change Request needs to be submitted against this document adding the newly assigned result code value. Result codes are available on a first-come-first-serve basis and are assigned in numerical order. Skipping result code values is discouraged as is reserving blocks of result codes for further assignment. Given the possibility for multiple Engineering Change Requests assigning result codes at the same time, conflicts may occur. As such, result code values are only guaranteed to be unique and allocated once the Engineering Change Request becomes an Engineering Change Notice. To ensure unique result code values, oversight of the allocation process is required and the responsibility of the CableLabs employee currently responsible for this specification.

7 CABLELABS RCP REGISTRY

7.1 Definition

This document establishes a CableLabs Receive Channel Profile (RCP) registry. RCPs are used by DOCSIS 3.0 cable modems to advertise their receiver capabilities. RCPs can be "Standard RCPs" defined by CableLabs (and existing in the CableLabs RCP namespace) or "Manufacturer RCPs" defined by the Manufacturer of a cable modem or cable modem silicon (and existing in the Manufacturer's RCP namespace).

DOCSIS 3.0 Cable Modem Termination Systems (CMTSs) support the cable operator configuration of Receive Channel Configurations (RCCs) based on the deployed downstream channel lineup and the details of a CM's receiver capabilities as described in an RCP encoding. Each RCC in the CMTS is indexed by the RCP-ID of the RCP upon which it is based. The CM itself may only advertise the RCP-ID, which is then used by the CMTS to match the CM to an appropriate RCC at Registration time. This registry provides the detailed RCP encoding associated with each RCP-ID to allow proper configuration of RCCs by the cable operator.

7.2 Format

Two encoding formats are defined for an RCP. The first is an XML encoding defined in [OSSIPv3.0], the second is a Type-Length-Value encoding defined in [MULPIv3.0]. The encoding format used for the CableLabs RCP registry is the XML format.

7.3 Defining New Receive Channel Profiles

Each request for a new entry in the CableLabs RCP registry must include the full XML encoding of the RCP, including an RCP-ID using either the CableLabs OUI (for a proposed new Standard RCP) or the Vendor's OUI (for a Manufacturer RCP), and an RCP Name.

8 CABLELABS ASN.1 CODES REGISTRY

8.1 Definition

This document establishes a CableLabs ASN.1 Codes registry. The purpose of this registry is to define a common repository for assignment of ASN.1 codes value of the type Object Identifier (OID) for CableLabs projects. Typically this registry contains the MIB Module Identities within the CableLabs enterprise branch for use within the Simple Network Management Protocol (SNMP), but can also contain any other ASN.1 definition used by other protocols or specifications.

8.2 SMI Network Management Codes

8.2.1 CableLabs Enterprise Number

Prefix:

4	smartAmpSystemMib	SMARTAMP-SYSTEM-MIB	[SCTE 283] Narrowband Transponder

9 CABLELABS APPLICATIONS REGISTRY

This section contains CableLabs assigned application identifiers, represented as unique integer values, to identify applications specified for cable clients. Each application identifier is accompanied by the CableLabs project specifying the application, the name of the application, an integer value representing the application identifier, and a reference specification. The principal use for application identifiers is within data definitions, such as MIB modules.

As an example, the PacketCable application identifier "1" represents the PacketCable RST application. Within PacketCable MIBs, it is used within the user MIB to associate specific users with the CableLabs RST application. Using the MIBs specified in [PKT EUE-DATA], specifically the MIB table pkcEUEUsrAppMapTable, the following row entries are of relevance:

- pkcEUEUsrAppMapAppOrgID.<user A>.<application index>=4491 (identifies CableLabs)
- pkcEUEUsrAppMapAppIdentifier.<user A>.<application index>=1 (identifies RST)

The above example specifies that user A is associated with the CableLabs specified application, RST.

The registry is specified in Table 20.

Table 20 - PacketCable Application Identifiers

Project	Application	Identifier	Reference Specification
PacketCable	Residential SIP Telephony (RST)	1	[PKT SP-RSTF]

10 CABLELABS URN REGISTRY

This section contains a registry for CableLabs URN namespaces. Not all CableLabs URNs are listed in this document as many could be part of projects that do not produce specifications, or would be difficult to maintain an up-to-date record in this document. However, projects are encouraged to list the leading part of the NSS (Namespace Specific String) [RFC 2141] with references to project names, URLs, or other type of references.

CableLabs URNs use the NID Namespace Identifier [RFC 2141] 'cablelabs' per [RFC 6289]. Some URN formatted namespaces and URIs are already defined in some XML namespaces defined in Section 4.

Table 21 shows registered URNs, or parts of them. Based on the [RFC 2141] URN definition this registry URNs structure is refined as follows to provide flexibility on the registration of URNs in Table 21:

```
<URN> ::= "urn:" <NID> ":" <projectNSSpart> ":" <subjectNSSpart> ":" <trailingNSSpart>
<NID> ::= 'cablelabs'
<projectNSSpart> per [RFC 2141] with the exception of ":"
<subjectNSSpart> := <NSS> ; per [RFC 2141]; the subject of the URN
<trailingNSSpart> := <NSS> ; per [RFC 2141]
```

While the URN above is the RECOMMENDED URN structure, other formats might be already being used. In such case only relevant parts of the URN are shown in Table 21. <trailingNSSpart> might be omitted in Table 21, refers to the reference for the complete list of URNs.

Table 21 - CableLabs URN Registry

Project	<URN>	References
DOCSIS CCAP	urn:cablelabs:params:xml:ns:yang:ccap	[CCAP-OSSI]

10.1 URLs and URN Namespaces Alignment

Section 4 listed a set of XML schema namespaces that may transition to URN as a future work revisions. The format of Section 4 is RECOMMENDED to define the entire URN structure for future defined URNs if applicable. To this effect, slash characters "/" of the format defined in Section 4.1 and shown in Section 4.2 are replaced with the character ":" with the exception of any trailing "/" which must be ignored.

11 DOCSIS PROVISIONING TLV NUMBER ASSIGNMENT REGISTRY

This section contains the registry for all DOCSIS Provisioning TLV number assignments.

These TLVs are used in CM configuration files and in MAC Management messages. They are also used in the RPHY GCP Protocol [R-PHY].

Currently these TLVs are used by one or more of the following specifications:

- DOCSIS specifications version 1.0, 1.1, 2.0, 3.0, 3.1
- DPoE specifications: v1.0, v2.0 (DPoE MULPI, DPoE MEF, DPoE SOAM)
- DPoG specifications: v1.0 (DPoG MULPI)
- DOCSIS family of specifications: L2VPN, TEI, DSG, eRouter, eDOCSIS
- DOCSIS DCA family of specifications: MHAv2

This section is structured where each main section describes the top-level TLVs and each subsequent section within the main section defines the sub-TLV definitions for the corresponding top-level TLVs.

11.1 Top-Level DOCSIS TLVs

Type	Description	Sub-TLV Section	Spec Defined
0	Pad		DOCSIS 1.0
1	Downstream Frequency		DOCSIS 1.0
2	Upstream Channel ID		DOCSIS 1.0
3	Network Access Control Object		DOCSIS 1.0
4	DOCSIS 1.0 Class of Service		DOCSIS 1.0
5	Modem Capabilities Encoding	11.1.1	DOCSIS 1.0
6	CM Message Integrity Check (MIC)		DOCSIS 1.0
7	CMTS Message Integrity Check (MIC)		DOCSIS 1.0

12 CABLELABS EXTENDED NETWORK TEST AND MONITORING REGISTRY

This section defines a File Type Registry for Proactive Network Maintenance (PNM) and Low Latency Reporting.

12.1 DOCSIS PNM Registry

12.1.1 Definition

This document establishes a CableLabs DOCSIS Proactive Network Maintenance (PNM) File Type Registry. PNM File Types are associated with PNM tests implemented in the CM or CCAP. PNM tests generate files to report measurements or test results. Refer to the Proactive Network Maintenance Object Model section of [CCAP-OSSIV3.1] and the Proactive Network Maintenance Requirements section of [CM-OSSIV3.1] for further details.

12.1.2 Format

The PNM File Type format is a four-byte hexadecimal identifier specific to the type of CCAP or CM PNM test that generated the data file. The first three bytes (0x504E4D or 0x504E4E) of the file type are encoded as the ASCII Hex values for the ASCII string "PNM" or "PNN". The "PNN" File Identifier indicates the file header contains version information. The fourth byte is encoded as a unique file type identifier, e.g., 0x01, 0x02, ..., 0xFF.

12.1.3 CM PNM File Types

The CM PNM File Type identifiers are defined in the number range 0x01 to 0x64.

Table 22 - CableLabs DOCSIS CM PNM File Type Codes

CM PNM Test	File Identifier
Symbol Capture	504E4D01
Symbol Capture	504E4E01

Triggered Spectrum Capture	504E4E6A

12.2 DOCSIS Latency Report Registry

12.2.1 Definition

This section is analogous to the PNM registry. Types are associated with Latency reports implemented in the CM or CCAP. Reports generate files to report Latency. Refer to the Latency Report section of [CCAP-OSSlv3.1] and the Latency Report Requirements section of [CM-OSSlv3.1] for further details.

12.2.2 Format

The Report File Type format is a four-byte hexadecimal identifier specific to the type of CCAP or CM report that generated the data file. The first three bytes (0x4C4C44) of the file type are encoded as the ASCII Hex values for the ASCII string "LLD". The fourth byte is encoded as a unique file type identifier, e.g., 0x01, 0x02, ..., 0xFF.

12.2.3 CCAP Latency Report File Types

The CCAP Report File Type identifiers are defined in the number range 0x10 to 0x19.

Table 24 - CableLabs DOCSIS CMTS Latency Report File Type Codes

CMTS Latency Report	File Identifier
Latency Report	4C4C4410

12.2.4 CM Latency Report File Types

The CM Report File Type identifiers are defined in the number range 0x01 to 0x09.

Table 25 - CableLabs DOCSIS CM Latency Report File Type Codes

CM Latency Report	File Identifier
Latency Report	4C4C4401

13 CABLELABS ERROR CODE REGISTRY

This section defines an Error Code Registry.

13.1 DOCSIS Error Code Registry

13.1.1 Definition

This document establishes a CableLabs DOCSIS Error Code Registry for events that are to be reported by DOCSIS devices through local event logging, and may be accompanied by syslog, SNMP notification or NETCONF notification.

13.1.2 Format

The format for the DOCSIS error code is as follows:

<Process><Error Number>.<Sub Error Number>

Where:

- Process is an ASCII upper case letter representing the process associated with the error.
- Error Number is composed of three numerical digits representing the specific error for the associated Process.
- Sub Error Number is composed of two numerical digits and is used as a refinement of the Error Number.

For example:

- I114.01
- D004.02

In order to use the error code in notifications to be logged or emitted via standard mechanisms such as SNMP notifications and Syslog logging, the error code is converted to an Event ID. The Event IDs are used to uniquely identify the type of event in the notifications or logs.

An Event ID is an INTEGER representation of the error code in decimal format. For the standard DOCSIS events, this number is derived from the error code using the following rules:

- The Event ID is an eight-digit decimal number.
- The first two digits (left-most) are the ASCII code for the letter in the first character of the error code, which represents the Process associated with the error.
- The next four digits are filled by the Error Number, the 3 digits between the letter and the dot in the error code and padded by a zero on the left.
- The last two digits are filled by the Sub Error Number, the two digits after the dot in the error code and padded by a zero on the left.

For example, Error Code I114.01 is converted into Event ID 73011401, and Error Code D004.02 is converted into Event ID 68000402. This convention only uses a small portion of available number space reserved for DOCSIS (0 to $2^{31}-1$).

13.1.3 DOCSIS Reserved Error Code Ranges

Table 26 - CableLabs DOCSIS Reserved Error Codes

Error Code Range	Specification Category	Event Group ¹	References
Axxx.xx	Reserved		
Bxxx.xx	CM, CCAP, RPHY	Refer to following sections	[CCAP-OSSI] [CCAP-OSSiv3.1] [OSSiv3.0]

Error Code Range	Specification Category	Event Group ¹	References
			[CM-OSSlv3.1] [R-OSSI] [CCAP-OSSlv4.0] [CM-OSSlv4.0]
Cxxx.xx	CM, CCAP		[CCAP-OSSI] [CCAP-OSSlv3.1] [OSSlv3.0] [CM-OSSlv3.1] [CCAP-OSSlv4.0] [CM-OSSlv4.0]

Vxxx.xx	CMTS, CCAP	IPDR	[OSSlv3.0] [CCAP-OSSlv3.1] [CCAP-OSSlv4.0]
Wxxx.xx	CMTS, CCAP	Multicast	[OSSlv3.0] [CCAP-OSSlv3.1] [CCAP-OSSlv4.0]

Error Code Range	Specification Category	Event Group ¹	References
Xxxx.xx	CMTS, CCAP, CM, RPHY	FDX and FDD; Refer to following sections	[CM-OSSlv4.0] [CCAP-OSSlv4.0] [R-OSSI]
Yxxx.xx	CMTS, CCAP		[OSSlv3.0] [CCAP-OSSlv3.1] [CCAP-OSSlv4.0]
Zxxx.xx	Reserved		

¹ Indicates the range is limited to a specific Event Group for the Specification Category

13.1.3.1 Remote PHY Reserved Error Code Ranges

The following table represents the reserved Error Code ranges for Remote PHY as specified in [R-OSSI].

Table 27 - Remote PHY Reserved Error Codes

Error Code Range	Description
B70x.xx	RPD Error Code Range
B80x.xx	CCAP Core Error Code Range

13.1.3.2 Flexible MAC Architecture Reserved Error Code Ranges

The following table represents the reserved Error Code ranges for FMA as specified in [FMA-OSSI].

Table 28 - FMA Reserved Error Codes

Error Code Range	Description
F7xx.xx	MAC NE Error Code Range
F8xx.xx	MAC Manager Error Code Range
F9xx.xx	PacketCable Aggregator Error Code Range

13.1.3.3 Smart Amplifier (SCTE 283) Reserved Error Code Ranges

The following table represents the reserved Error Code ranges for the SCTE Smart Amplifier as specified in [FMA-OSSI].

Table 29 - Smart Amplifier (SCTE 283) Reserved Error Codes

Error Code Range	Description
O1xx.xx	Smart Amplifier Error Code Range

13.1.4 Coherent Optics Reserved Error Code Ranges

Table 30 - CableLabs Coherent Optics Reserved Error Codes

Error Code Range	Specification Category	Event Group	References
C90x.xx	CTD		[OPT-P2P-OSSI]

13.1.4.1 Full Duplex DOCSIS (FDX) and Frequency Division Duplexing (FDD) Reserved Error Code Ranges

The following table represents the reserved Error Code ranges for DOCSIS 4.0 FDX and FDD as specified in [CM-OSSlv4.0], [CCAP-OSSlv4.0], and [R-OSSI].

Table 31 - DOCSIS 4.0 FDX and FDD Reserved Error Codes

Error Code Range	Description
X0xx.xx	DOCSIS 4.0 CM Error Code Range
X1xx.xx	DOCSIS 4.0 CCAP Error Code Range
X2xx.xx	RPD Error Code Range
X3xx.xx	CCAP Core Error Code Range

Appendix I Acknowledgements

On behalf of CableLabs and its participating member companies, we would like to extend our thanks to all member and vendor participants who contributed to the development of the protocol fields registered in this specification. Key contributors to this document are recognized individually in each of the CableLabs project-specific specifications.

Steve Burroughs - CableLabs

Kirk Erichsen - OAM Technology Consulting

Brian Hedstrom - OAM Technology Consulting

Kevin Luehrs - OAM Technology Consulting

Appendix II Revision History (Informative)

The following engineering changes are incorporated into CL-SP-CANN-I02-080306.

ECN Identifier	Accepted Date	Title of EC
CANN-N-07.0028-3	7/25/2007	Registration of additional Diameter AVPs for PacketCable 2.0
CANN-N-07.0029-2	7/18/2007	Update to DIAMETER Registrations
CANN-N-07.0033-2	11/28/2007	New Section CableLabs ASN.1 Codes Registry
CANN-N-07.0036-3	2/20/2008	Addition of application registry

The following engineering change is incorporated into CL-SP-CANN-I03-090811.

ECN Identifier	Accepted Date	Title of EC
CANN-N-08.0038-2	1/28/2009	Modifications to support SMA devices

The following engineering changes are incorporated into CL-SP-CANN-I04-100212.

ECN Identifier	Accepted Date	Title of EC
CANN-N-09.0045-1	11/11/2009	SAFI namespace update
CANN-N-09.0046-1	12/16/2009	Home Networking Addition

The following engineering change is incorporated into CL-SP-CANN-I05-110210.

ECN Identifier	Accepted Date	Title of EC
CANN-N-10.0091-1	1/5/2011	New OID for Online Content Access Project

The following engineering change is incorporated into CL-SP-CANN-I06-111117.

ECN Identifier	Accepted Date	Title of EC
CANN-N-11.0099-2	10/5/2011	Addition of cmapMib to CableLabs DOCSIS Project Codes

The following engineering changes are incorporated into CL-SP-CANN-I07-120809.

ECN Identifier	Accepted Date	Title of EC
CANN-N-12.0110-4	7/11/2012	Add support for RFC6289 and reserve CCAP YANG namespace
CANN-N-12.0112-1	6/13/2012	Definition of Wireless project in and TR-069 registry in the CANN spec

The following engineering change is incorporated into CL-SP-CANN-I08-121113.

ECN Identifier	Accepted Date	Title of EC
CANN-N-12.0111-2	10/17/2012	URN namespace registry for CANN spec

The following engineering change is incorporated into CL-SP-CANN-I09-130404.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-12.0115-1	12/12/2012	Correction to CANN-N-12.0111-2	Sundaresan

The following engineering change is incorporated into CL-SP-CANN-I10-140729.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-14.0118-4	5/14/2014	New Chapter for DOCSIS TLV reservation	Sundaresan

The following engineering changes are incorporated into CL-SP-CANN-I11-141218.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-14.0120-1	8/13/2014	Add new DOCSIS schema namespaces	Barringer
CANN-N-14.0121-1	10/15/2014	Security CVC Chain TLV Numbers for CANN	Lopez
CANN-N-14.0122-2	10/15/2014	New project code for DOCSIS PNM MIB	Alvarez
CANN-N-14.0123-1	10/1/2014	Updates for DPoX	Burroughs
CANN-N-14.0124-1	11/26/2014	Add reference for 3.1 DOCSIS CM OSSI specification	Alvarez
CANN-N-14.0125-1	12/3/2014	Reserve DPoE SF Collection TLVs	Burroughs

The following engineering changes are incorporated into CL-SP-CANN-I12-150319.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-14.0126-2	2/11/2015	Update CANN spec to add OID prefix for eRouter Tunneling MIBs	Berg
CANN-N-15.0127-1	2/11/2015	Adding eRouter TLVs 53 & 54 to CANN	Kloberdans

The following engineering changes are incorporated into CL-SP-CANN-I13-150515.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-15.0128-1	4/15/2015	Add DOCSIS project code for IF31 MIB	Sundelin
CANN-N-15.0131-1	4/15/2015	DPoE Multipoint sub-TLV Assignment	Burroughs
CANN-N-15.0132-1	4/29/2015	Add newly defined TLV 202 sub-types to CANN specification	Berg

The following engineering changes are incorporated into CL-SP-CANN-I14-160317.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-15.0136-1	12/9/2015	Create new namespaces for DOCSIS 3.1 schemas	Barringer
CANN-N-15.0137-1	12/16/2015	Add GRE and MAP MIBs to SMI Network Management Codes in CANN	Berg
CANN-N-15.0139-3	2/24/2016	Retire and reserve the DAC TLV	Burroughs
CANN-N-16.0141-1	2/24/2016	Update MIB Module Names	Hedstrom

The following engineering changes are incorporated into CL-SP-CANN-I15-170111.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-16.0143-1	4/6/2016	Update TLV Registry for L2CP Processing	Burroughs
CANN-N-16.0144-1	4/20/2016	Reservation of RPHY YANG namespace	Hedstrom
CANN-N-16.0145-2	4/27/2016	Addition of DOCS-RPHY-MIB OID	Hedstrom
CANN-N-16.0148-2	6/30/2016	Update Wireless TR-069 Data Model Registry	Burroughs
CANN-N-16.0151-1	7/21/2016	Reserve Deprecated SMI Numbers	Burroughs
CANN-N-16.0154-1	8/25/2016	Add Top Level L2CP TLV	Burroughs

The following engineering changes are incorporated into CL-SP-CANN-I16-170510.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-17.0156-1	3/9/2017	Addition of PNM Test Types	Hedstrom
CANN-R-17.0158-1	4/13/2017	CANN EC to accompany MULPI diplexer configuration EC	Dolas

The followings engineering change is incorporated into CL-SP-CANN-I17-171220.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-17.0164-2	11/16/2017	Register new PNM FileTypes for Versioning	Burroughs

The following engineering change is incorporated into CL-SP-CANN-I18-180509.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-18.0167-2	4/12/2018	New Error Code Set Registry Section	Hedstrom

The following engineering changes are incorporated into CL-SP-CANN-I19-190422.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-18.0168-1	11/8/2018	Add new DOCS-RPHY-SEC-MIB MIB Module OID	Hedstrom
CANN-N-18.0170-3	2/7/2019	Add Latency Report to Registry	Burroughs
CANN-N-19.0171-1	4/18/2019	Add Coherent Optics reserved namespaces to CANN	Hedstrom

The following engineering changes are incorporated into CL-SP-CANN-I20-200715.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-19.0174-1	11/21/2019	Add new CableLabs DOCSIS Project Code for DOCS-FDX-MIB	Hedstrom
CANN-N-19.0175-1	12/12/2019	Reserve Event number space for FMA	Hedstrom
CANN-N-20.0177-1	7/2/2020	Reserve Event number space for FMA PacketCable Aggregator Events	Hedstrom

The following engineering changes are incorporated into CL-SP-CANN-I21-220831.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-20.0178-2	11/19/2020	Add Remote PHY GCP TLVs and SSH Server Settings TLV type	Jewitt
CANN-N-21.0179-1	2/25/2021	Define CableLabs Project Code for DOCS-FMA-LI-MIB	Hedstrom
CANN-N-21.0181-1	4/29/2021	Assign DOCSIS config TLV 99	Jones
CANN-N-21.0182-2	12/2/2021	Add OUDP leakage Detection to CableLabs DOCSIS Projects	Burroughs

The following engineering changes are incorporated into CL-SP-CANN-I22-230308.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-22.0186-1	11/17/2022	Align TLV and Capability to D4.0	Sundaresan
CANN-N-23.0187-1	3/1/2023	FAST-TRACK: Align Modem Capability TLV names with MULPIv4.0	Jones

The following engineering changes are incorporated into CL-SP-CANN-I23-240802.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-23.0189-1	11/2/2023	Updates to support new error code set for FDX system event support	Erichsen
CANN-N-24.0190-1	7/25/2024	CANN spec update to support SCTE 283 MIBs and reserve Project Code for the new DOCS-IF40-MIB	Erichsen

The following engineering change is incorporated into CL-SP-CANN-I24-250320.

ECN Identifier	Accepted Date	Title of EC	Author
CANN-N-24.0191-2	2/20/2025	CANN I24 Candidate EC	Erichsen
